Using the Colour Selector

## Bringing colour to life

Colour is the key medium in which designers express their creativity – and is an integral part of the Perspex offer.

With an extensive range of colours including delicate tints, vivid primaries, fresh pastels and subtle textures - the quality and depth of Perspex colours are unsurpassed. Innovative additions to the range include cool, sophisticated Perspex Frost; intriguing and iridescent Perspex Pearlescent and the latest exciting product in the range - Perspex Fluorescent. And of course the best way to appreciate how Perspex really can bring colour to life is to see it for yourself – which is why we have introduced this new Perspex colour selector.

Our new colour card shows a selection of some of our most popular colours – including solid colours, translucents and tints. All printed on an easy to use selector card. With Perspex you can bring a new world of colour to any application – whether its an international sign programme, a specialist point of purchase display or a completely new corporate identity colour. And if you don't see exactly the colour you're looking for – we have many more custom colours on our range from which to choose and of course we can create new bespoke colours to your exact specification.

Printing can only show a little of the true beauty of Perspex colours, and so to help you fully appreciate how Perspex can bring colour to life we would be happy to send you a sample of any of the colours that have captured your imagination (see back for sample order details) and for further information on our standard and custom range and bespoke colours contact your local Perspex from Lucite sales office.
