

KS Polyolefin-Adhesive-Set

Product Description

An adhesive system with K+S MULTI-PUSPOSE ADHESIVE/MAGNUMBOND

For bonding with difficult-to adhere plastics:

- Polyethylene and polypropylene and most polyolefin and most Elastomers
- PTFE, EPDM rubber and difficult-to-adhere plastics
- Silicone rubber

A product for hobby and household, suitable for

- Wood
- Metal
- Plastics
- Rubber
- Pottery
- Glass
- Porcelain

KS Polyolefin-Adhesive-Set

The K+S POLYOLEFIN-ADHESIVE-SET is an adhesive primer system with which polyolefin and other difficult-to-adhere materials can be bonded using the K+S MULTI-PURPOSE ADHESIVE/MAGNUMBOND.

The SET includes

K+S Polyolefin-Primer, 10m l bottle. K+S MULTI-PURPOSE ADHESIVE/MAGNUMBOND is also available in a 10g, 20g or 50g bottle

Areas of application

K+S Polyolefin-Primer is a pre-treatment system for difficult-to-adhere surfaces, which dries quickly at room temperature. Without this primer, polyolefin such as polypropylene and polyethylene, elastomers such as santoprene and other difficult-to-adhere plastic and rubber types like PTFE and silicone cannot normally be bonded. Pre-treatment with K+S Polyolefin-Primer makes it possible to bond these materials with one another or with other materials with K+S MULTI-PURPOSE ADHESIVE/MAGNUMBOND.
